

DATASHEET · HIGH SECURITY SEAL

BAR SEAL

Strong, Hardened Barrier Seal designed for Security Container Central Bars

ISO17712:2013 certified High Security Barrier Seals with adjustable locking positions for securing container central bars. Made with high-strength steel, the Bar Seals are designed to provide extreme protection to deter tampering and illegal access into sealed containers and trucks.

Once the locking pins are applied and locked in, the Bar Seals are secured and cannot be opened. Identical serial numbers are printed on the bar and bolt seal to prevent parts substitution or replacement.

Bar Seals can only be removed with a electric grinder or electric bolt cutter.
